

SeMSy® Contraventions Process

HEMISPHERE® SeMSy® Contraventions Process for fast backup and archiving of live observed incidents / contraventions on a HEMISPHERE® SeMSy® Workstation

Function

The HEMISPHERE® SeMSy® Contraventions Process is used to quickly and easily secure recordings of incidents or contraventions that are observed live. The app supports operators on a SeMSy® workstation in monitoring and evaluating a camera live stream with a special function set.

Fast Recording

If an operator observes an incident / contravention live, he can immediately start recording the camera live stream. For this purpose, the app has a functional control center on a timeline for starting, stopping and aborting recordings.

Automatic Backup

After a recording is stopped again, it is automatically backed up. This is done in the background without the operator having to switch to the corresponding HEMISPHERE® SeMSy® Backup Application. The backup is saved with time stamp, camera name and the name of the operator in the archive.

Cancelation Only with Reason

Once a recording of an incident has been started, it can be canceled again without a backup being made. However, it is necessary that the operator causes the abortion. The operator selects an abort option from an automatically displayed drop-down list of prefabricated reasons. In addition, certain reasons may require

manual text entry in a comment field. Depending on the requirements of a system, selection options with subsequent text input fields can be configured individually.

Logbook

All user actions – start/stop/backup creation – are fully logged in the HEMISPHERE® SeMSy® Logbook Application. Also, recording cancelations together with their reasons are noted there.

Application

The HEMISPHERE® SeMSy® Contraventions Process was designed for the monitoring of parking areas and public areas, for example, in which operators systematically evaluate specific contraventions live and secure evidence of them.

Note

The verification and processing of the violations recorded in the Contraventions Process takes place in the HEMISPHERE® Traffic Enforcement Module. The adaptation of this module to the current HEMISPHERE® Kubernetes platform is currently still in preparation.
